My dear Gray

As far as my own specimens are concerned I find I have no additional materials to make any alteration in the enclosed which I have carefully looked over - I shall this winter work up Seemann's Leguminosæ from the Sierra Madre of N. W. Mexico and shall then go through several Mexican genera but that will be too late for Wright's so that instead of the labour of [illegible] men I shall have all the benefit of your labours. - I long to see something again from your pen. As for me Spruce's last Para plants call upon me for my whole time till I have got rid of them

Yours very sincerely
